Dear Mr. Volovikov,

June 05, 2022

On behalf of the ReMining Corporation I would like to sincerely thank you for services and cooperation. Since 2017 specialist of ARSKA Technologies have been providing us with outstanding services for our critical projects.

The scope of work included design, equipping and assembly of laboratory unit, as well as preparation and conducting experimental research. The facility developed is a pilot plant designed for chemical processing of plastic waste with a maximum capacity of up to 5 kg/h. The purpose of the unit is to carry out research and development work on the technology for catalytic cracking of plastic waste to produce liquid hydrocarbons.

ARSKA Technologies team developed a process scheme and calculations as well as prepared material and heat balances; developed designs for non-standard process equipment; designed documentation for the manufacturing of equipment; selected control and automation; selected equipment suppliers and manufacturers; conducted assembly of the unit, communications, automation and control equipment and carried out commissioning works.

Currently series of experimental work are being held at the unit, during which ARSKA's specialists prepare temporary process regulations; conduct experiments using different compositions of plastic waste on different catalysts; prepare reports and select the optimal catalyst and composition of recycled plastic waste.

We appreciate your time and efforts in working on this project. It provided us with a hand full of essential data and many improvements in current and developing processes had already been added based on it.

A handwritten signature in blue ink that reads "Dean Rose".
